

<b>Session</b>	<b>2024-25 (ODD)</b>	<b>Course Name</b>	<b>Web Technology Lab</b>
<b>Semester</b>	<b>3</b>	<b>Course Code</b>	<b>23CT1301</b>
<b>Roll No</b>	<b>56</b>	<b>Name of Student</b>	<b>Mangesh Gavhane</b>

<b>Practical Number</b>	<b>9</b>
<b>Aim</b>	<p>Write JavaScript to validate the following fields of the Admission Registration page.</p> <p>1. <b>Student Name</b> (Name should contains alphabets and the length should not be less than 6 characters).      2. <b>Date of Birth</b> (Should be a valid date and age &gt; 17) 3. E-mail id (should not contain any invalid and must follow the standard pattern name@domain.com) <b>4. Mobile Number</b> (Phone number should contain 10 digits only).  <b>5. Course Selection</b> (At least one course must be selected)</p>

Theory	<p>Form validation is a process of verifying that the data entered by the user is accurate, complete, and meets the required format before it is sent to the server.</p> <p>JavaScript provides client-side validation, meaning the form data is checked directly in the browser, improving user experience and reducing server load.</p> <p>Form validation ensures that:</p> <ul style="list-style-type: none"> <li>• Incorrect or incomplete data is not submitted.</li> <li>• Users are prompted to correct mistakes immediately.</li> <li>• The application becomes more reliable and secure.</li> </ul> <p>There are two types of form validation:</p> <ol style="list-style-type: none"> <li>1. Client-side validation: Performed using JavaScript before sending data to the server.</li> <li>2. Server-side validation: Performed after the form data is submitted to the server.</li> </ol> <p>In this practical, client-side validation is implemented using JavaScript functions and Regular Expressions (RegEx) to check the following fields:</p> <ol style="list-style-type: none"> <li>1. Student Name: Must contain only alphabets and have a minimum length of 6 characters.</li> <li>2. Date of Birth: Must represent a valid date, and the student's age should be greater than 17.</li> <li>3. E-mail ID: Must follow the standard format name@domain.com.</li> <li>4. Mobile Number: Must be exactly 10 digits.</li> <li>5. Course Selection: At least one course must be selected.</li> </ol> <p>JavaScript functions like document.getElementById() are used to access form elements, and conditional statements (if, else) are applied to validate the data. If any field is invalid, a suitable error message is displayed, preventing the form submission.</p> <p>This ensures that only properly formatted and meaningful data is accepted by the form.</p>

}
```

**Output:**

The screenshot shows a web browser window titled "Admission Registration Form" with the URL "http://127.0.0.1:3000/Practical9.html?serverWindowId=22ef0196-3aa2-488f-bd". The form itself has a light blue header and a white body. It contains fields for Student Name, Date of Birth, Email ID, and Mobile Number. Under "Select Course", there are three options: BCA (unchecked), BBA (checked), and BSc (unchecked). A large blue "Submit" button is at the bottom. Below the button, a red error message reads "X Age must be 18 or older.".

**Admission Registration Form**

**Student Name:**  
Samyak Pusate

**Date of Birth:**  
10 / 20 / 2025

**Email ID:**  
samyak@gamil.com

**Mobile Number:**  
9763410234

**Select Course:**  
 BCA  BBA  BSc

**Submit**

X Age must be 18 or older.
